PROCEDURAL HISTORY

The parties in this matter agree to the terms and conditions of the attached Stipulation as the final decision of this matter, subject to the approval of the Wisconsin Medical Examining Board. The Board has reviewed the attached Stipulation and considers it acceptable.

Accordingly, the Board in this matter adopts the attached Stipulation and makes the following:

## FINDINGS OF FACT

1. William P. Fast, M.D., Respondent herein, date of birth 4/21/49, is duly licensed to practice medicine and surgery in the state of Wisconsin, license #21673. This license was first granted on 7/14/78.
2. Respondent's most recent address on file with the Wisconsin Medical Examining Board is 208 Parker Street, Boscobel, Wisconsin, 53805.
3. At all times relevant to this action, Respondent was practicing as a family practice physician in Boscobel, Wisconsin.
4. L.H., the patient herein, date of birth 12/18/12, resided at the Boscobel Area Health Care facility from 7/23/99 through 5/17/01. The patient's daughter had the health care power of attorney for the patient. Respondent was the patient's regular physician throughout the period of time that she resided at the Boscobel Area Health Care facility.
5. The patient had on file with the Boscobel Area Health Care facility, effective 8/16/00, an advanced directive status of "do not resuscitate".
6. Over the period from 4/30/01 through 5/11/01 the patient experienced symptoms of nausea, vomiting, loose stools, weakness, poor appetite and weight loss. On 5/11/01, the staff at the Boscobel Area Health Care facility contacted Respondent's office and scheduled the patient for an appointment with Respondent at his office at the Boscobel Clinic at 11:15 a.m. on 5/11/01.
7. On 5/11/01, Respondent examined the patient at his office and prescribed Tetracycline for an infected ulcer on the patient's right foot. He also ordered Metoclopramide for the patient's nausea. The patient returned to the Boscobel Area Health Care facility following her appointment with Respondent.
8. The patient continued to experience nausea, vomiting and a poor appetite from 5/11/01 through 5/14/01.
9. On 5/14/01, Respondent was notified by the staff at the Boscobel Area Health Care facility of the patient's continuing nausea, vomiting, poor appetite and weight loss. Respondent ordered a CT scan of the patient's chest and a CT scan of the patient's abdomen and pelvis to be performed with oral contrast only. Respondent did not order any additional x-rays at that time. Respondent also ordered a basic metabolic panel.

10. The specimen for the basic metabolic panel was collected at 1425 on 5/14/01 and the laboratory analysis and report were completed by 1511 on 5/14/01. The laboratory report recorded as follows:

	<u>Result</u>	<u>Normal Range</u>
Sodium	144	136 – 145
Potassium	4.3	3.5 – 5.0
Cl	104	98 – 108
Carbon Dioxide	19.3	24 – 32
Blood Urea Nitrogen	153	7 – 18
Calcium	9.8	8.8 – 10.5
Creatinine	4.4	0.6 – 1.3
Glucose	114	70 – 110

The results of the laboratory studies were telephoned by the laboratory to the Boscobel Area Health Care facility at 1510 on 5/14/01.

11. The staff at the Boscobel Area Health Care facility contacted the Respondent at 1600 on 5/14/01 and advised him of the laboratory values for the sodium, the blood urea nitrogen and the creatinine. Respondent ordered that the diuretic the patient was taking be discontinued.

12. The CT scan of the patient's chest was obtained on 5/14/01 and the CT scan of the patient's abdomen and pelvis were obtained on 5/15/01. The staff at the Boscobel Area Health Care facility administered the first bottle of oral contrast for the CT scan of the abdomen and pelvis to the patient commencing at 0600 on 5/15/01 and administered the second bottle of oral contrast commencing at 0700 on 5/15/01.

13. On 5/16/01, the radiologist read the CT scans of the patient's chest and of the patient's abdomen and pelvis. He read the CT scan of the abdomen and pelvis as demonstrating a large amount of oral contrast accumulated within a dilated stomach and in the proximal small bowel consistent with an incomplete mechanical small bowel obstruction, marked distension of the urinary bladder and diverticulosis of the of the descending and sigmoid colon. The radiologist recommended that the attending physician consider placement of a nasogastric tube. The radiologist dictated his radiology report making these findings and recommendations on 5/16/01 and this radiology report was transcribed on 5/16/01.

14. At 0805 on 5/16/01, the nurse at the Boscobel Area Health Care facility evaluated the patient and noted that her extremities appeared bluish in color, her axillary temperature was 93.7, her blood pressure was 146/80, her pulse was 120, her respirations were 40 and her oxygen saturation on room air was 97%. At 0915, the patient's pulse was 122, her axillary temperature was 94.1 and her oxygen saturation on room air was 84%. The nurse re-evaluated the patient at 0920 on 5/16/01 and her axillary temperature was 95.5, her pulse ranged between 88 and 100, her respirations were 28 and her oxygen saturation on room air was 94%. The patient denied shortness of breath at that time and she did not appear to be cyanotic. The nurse attempted to contact Respondent to update him on the patient's condition.

15. Respondent contacted the Boscobel Area Health Care facility by telephone at 1000 on 5/16/01 and the nurse updated him on the patient's condition including her continuing nausea. Respondent was not aware of and was not advised of the results of the CT scans of the chest and of the abdomen and pelvis. Respondent gave an order for Compazine suppositories to be administered every 12 hours as needed. This was the Respondent's last contact with the patient prior to her death at approximately 1700 on 5/17/01. Another physician provided coverage for Respondent's patients, including L.H., on 5/17/01.

16. Respondent's conduct in providing medical care for the patient as set forth above fell below the minimum standards of competence accepted in the profession in that he failed to order an abdominal series of x-rays to be obtained and interpreted prior to administering the oral contrast for the CT scan of the abdomen and pelvis.

17. Respondent's conduct created the unacceptable risks that the patient may have been suffering from a perforation of the bowel or an obstruction of the bowel which may have contraindicated the administration of the oral contrast. Oral contrast administered in the presence of a perforation of the bowel creates the unacceptable risks that the contrast material will enter the abdominal cavity and cause inflammation of the abdominal cavity, additional discomfort for the patient and complicate any potential medial procedures to treat the perforation of the bowel or any of the complications arising out of the perforation of the bowel. Oral contrast administered in the presence of an incomplete or complete bowel obstruction creates the unacceptable increased risk of aspiration.

18. A minimally competent physician, to avoid or minimize the unacceptable risks to the patient, would have ordered an abdominal series of x-rays to assess the patient for a perforation of the bowel and for a bowel obstruction prior to administering the oral contrast for the CT scan of the abdomen and pelvis.
