The parties in this matter agree to the terms and conditions of the attached Stipulation as the final disposition of this matter, subject to the approval of the Medical Examining Board (Board). The Board has reviewed this Stipulation and considers it acceptable.

Accordingly, the Board in this matter adopts the attached Stipulation and makes the following Findings of Fact, Conclusions of Law, and Order.

FINDINGS OF FACT

1. Respondent Wayne W. Liou, M.D., (Year of Birth 1968) is licensed in the state of Wisconsin to practice medicine and surgery, having license number 48691-20, first issued on October 19, 2005, with registration current through October 31, 2023. Respondent's most recent address on file with the Wisconsin Department of Safety and Professional Services is in Eden Prairie, Minnesota 55344.

2. At all times relevant to this proceeding, Respondent practiced as a radiologist and provided remote/teleradiology services to a hospital in Wisconsin (Hospital).

3. On September 17, 2014, a forty-nine-year-old male patient (Patient A) was admitted to the Hospital after presenting to the emergency room with complaints of numbness and

tingling to extremities, left arm paresthesia, an abnormal EKG with left ventricular hypertrophy, and a concurrent viral upper respiratory infection.

4. Patient A underwent a CT cervical spine with contrast, among other imaging studies. Respondent performed a preliminary interpretation of the CT on an emergent basis. Respondent's findings included "no significant spinal central canal or neural foraminal stenoses." Respondent's impression was:

No evidence of acute cervical bony injury, no regions of abnormal enhancement and nonspecific mild fat stranding in the medial lower left neck near the thoracic inlet suggesting scarring, edema, or inflammation.

5. On September 18, 2014, the Hospital's in-house radiologist reviewed and interpreted the same CT cervical spine that Respondent had interpreted, and found:

FINDINGS: There is left C7-T1 facet joint widening and severe erosive changes. There is a multiloculated posterior perifacet abscess measuring 3 x 1.5 x 2 cm extending from C6-7 to T1-2. There is sclerosis and narrowing of the left C6-7 and T1-2 facet joints without frank erosive changes... There is disc space narrowing, marginal spurring facet joint narrowing can sclerosis from C4-5 to C6-7. Atlantoaxial articulation intact. Neural foramina appear patent.

IMPRESSION: Left C7-T1 septic joint arthritis with perifacet abscess and inflammatory changes.

6. Respondent failed to report that the CT showed narrowing of the spinal canal and/or compression of the cord, as well as the existence of fluid collection around the facet. These findings should have been recognized and noted regardless of history provided to Respondent. This failure departed from the standard of minimally competent medical practice.

7. In resolution of this matter, Respondent consents to the entry of the following Conclusions of Law and Order.
